Albedo

Albedo (normalised)

GIRO

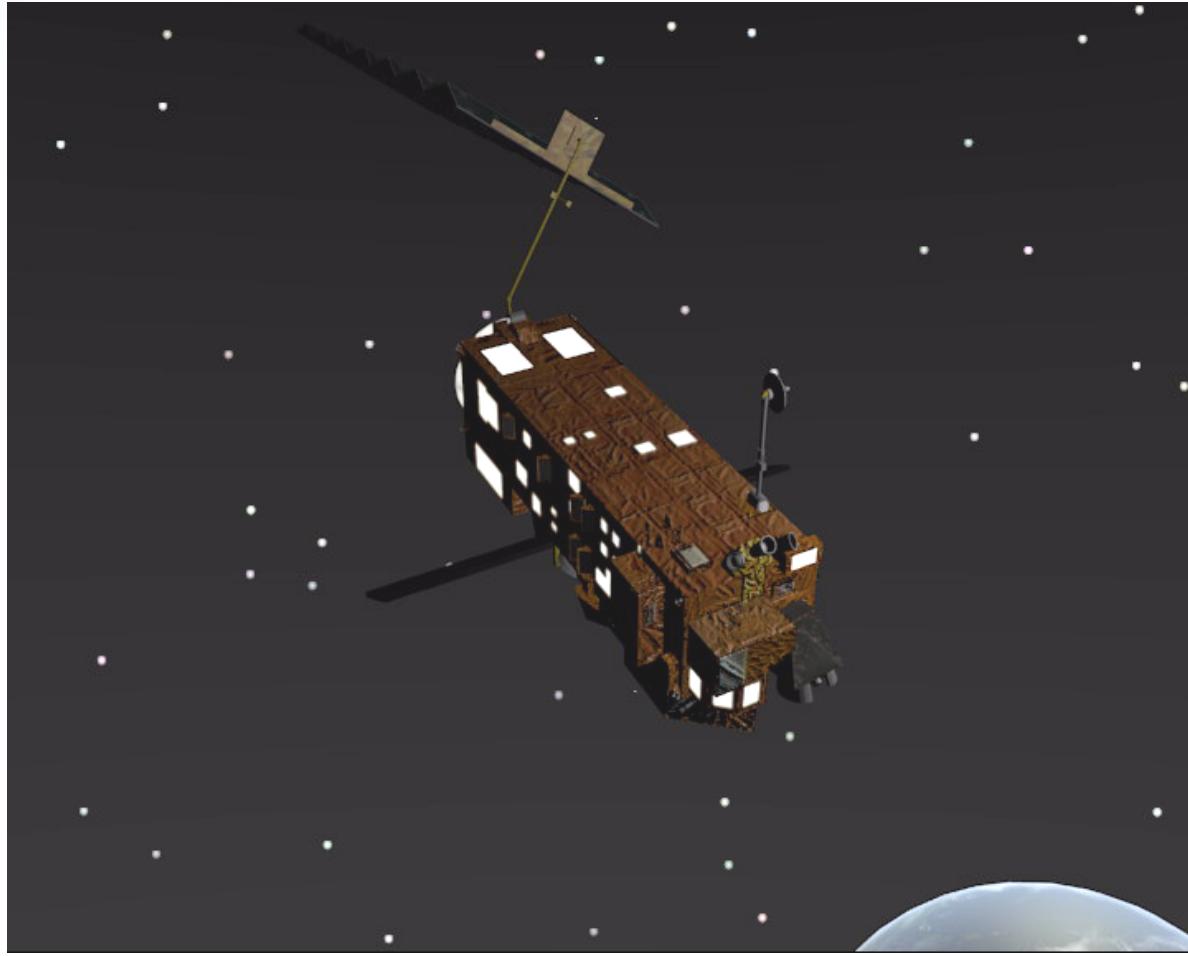

Study

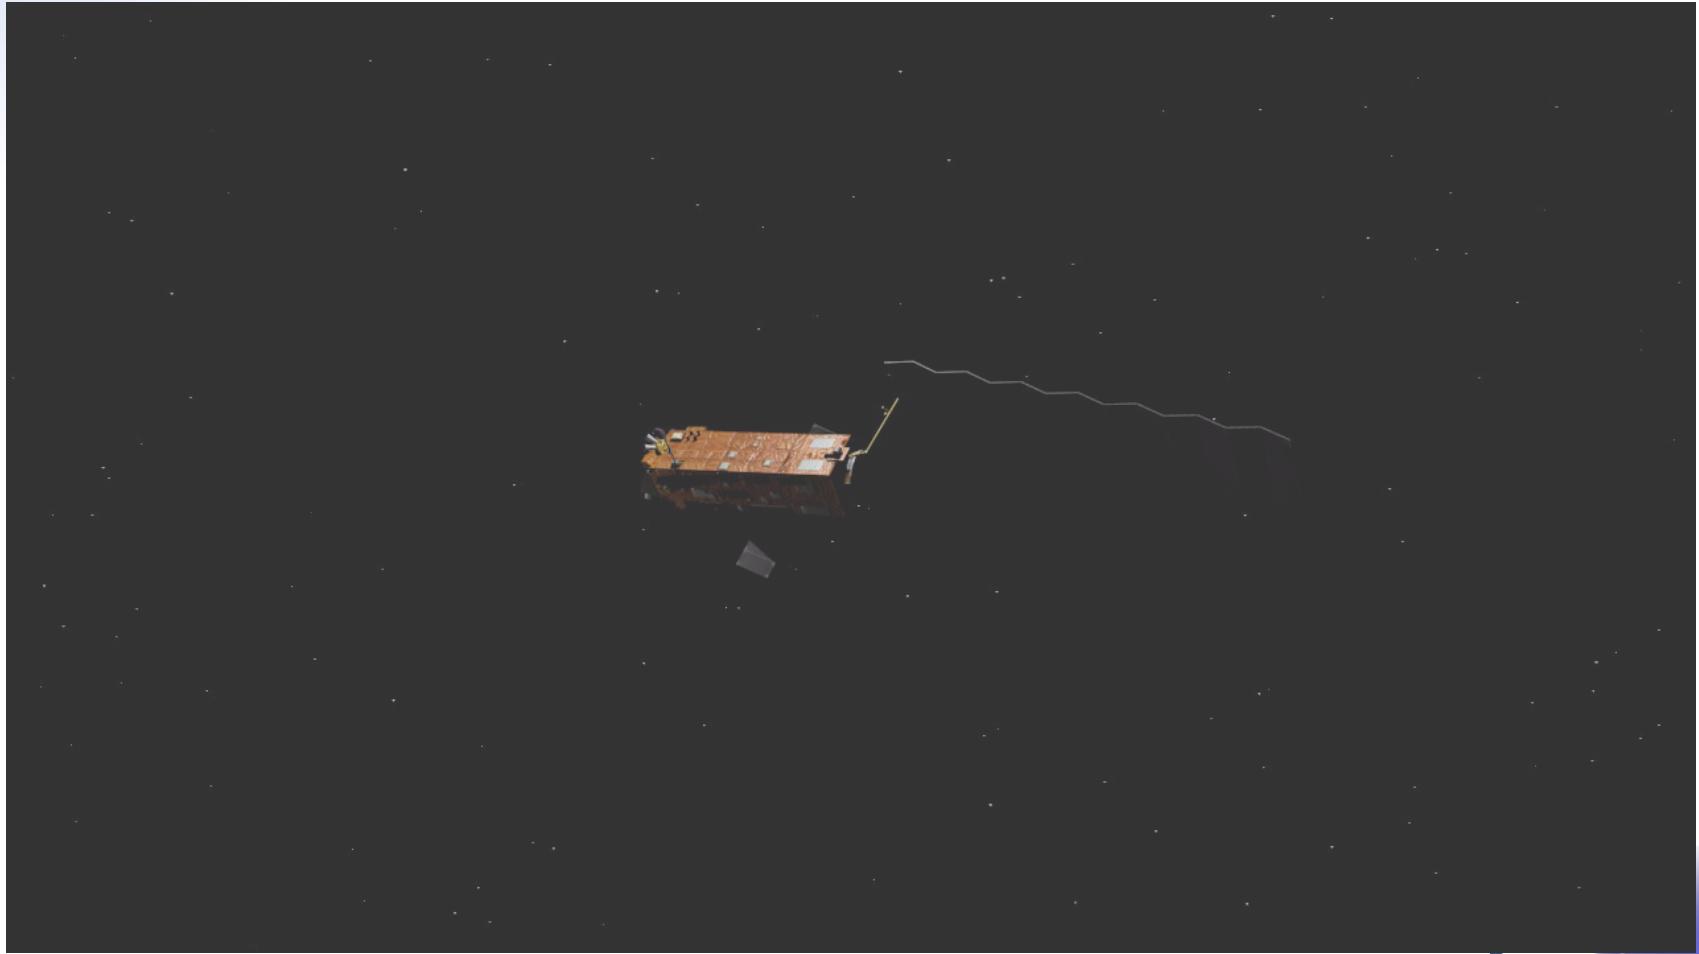

- Focus
 - Difference spectral response
 - GIRO low spectral resolution (32 bands)
 - Interpolation based on scaled Apollo-return soil
 - Definition reference calibration scale
 - GIRO absolute calibration uncertain
- Solution: SCIAMACHY

SCIAMACHY on ENVISAT

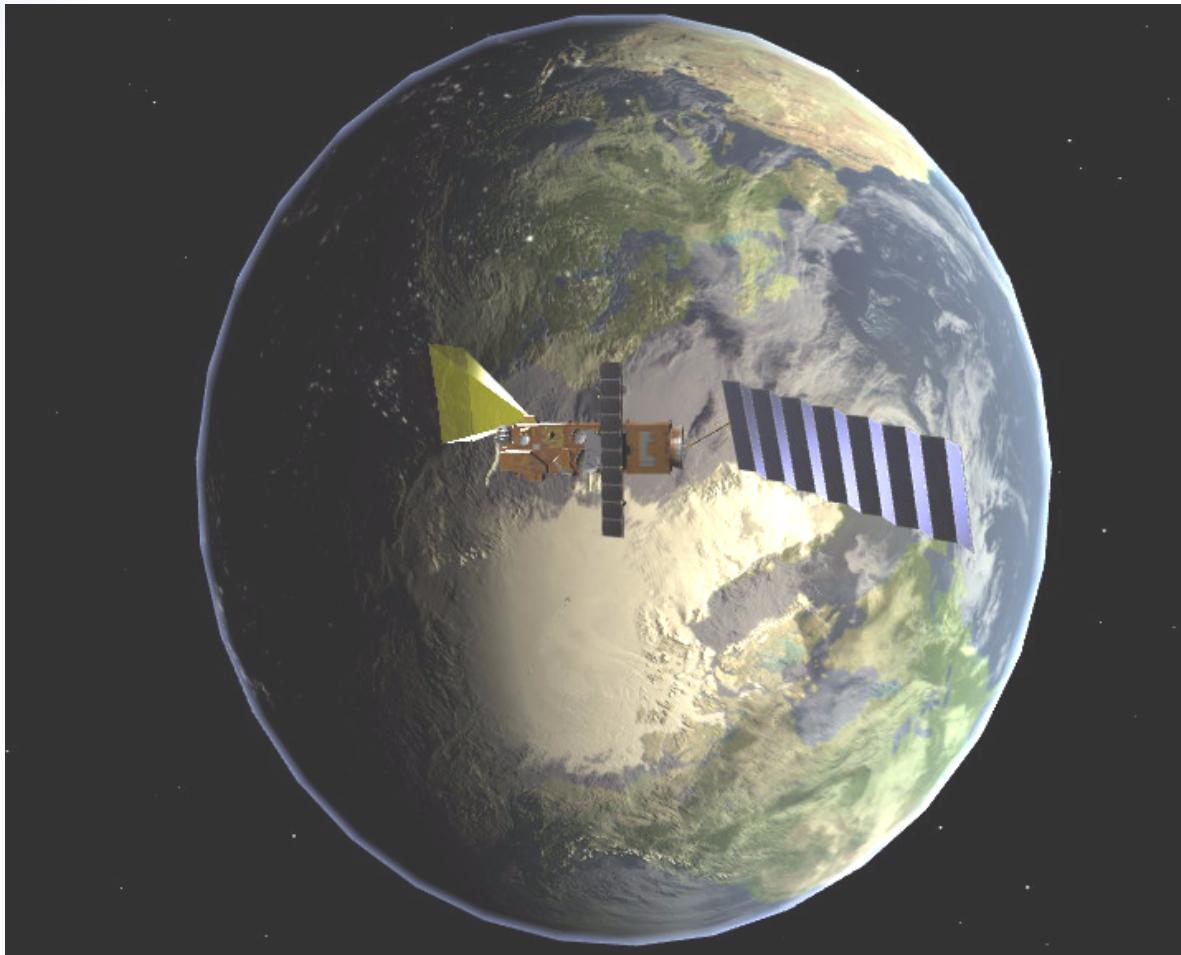

The instrument

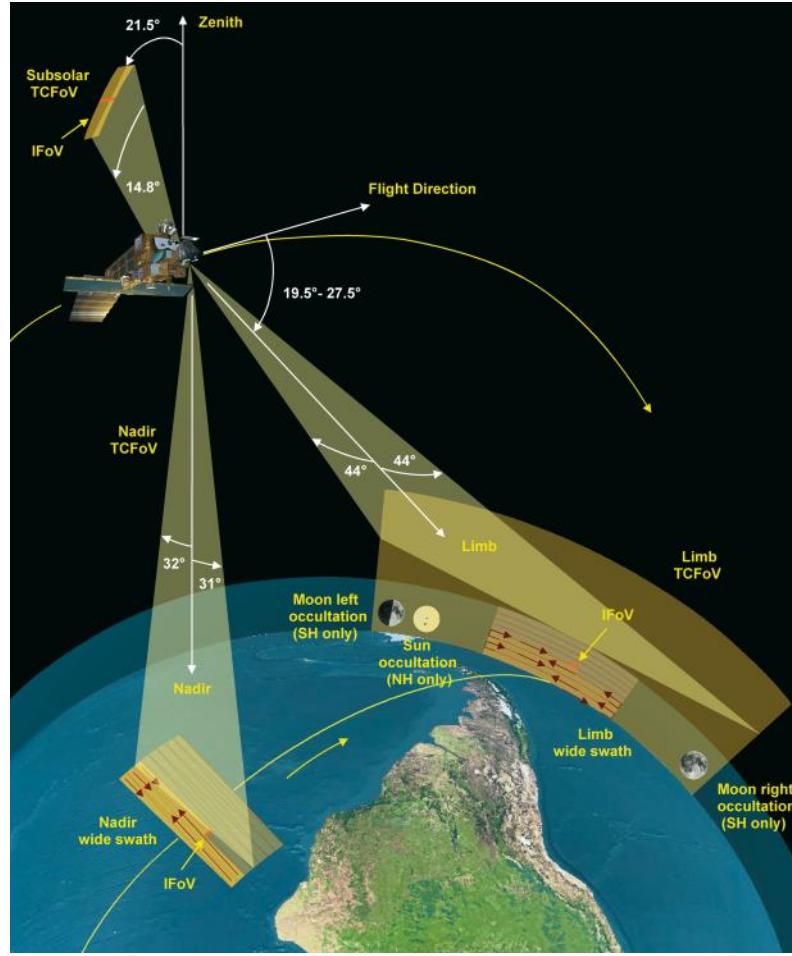

- Imaging spectrometer
- Spatial dimensions through scan mirror(s):
 - IFoV: 0.045 degrees by 1.8 degrees
- Spectral dimension through 8-channel spectrometer, 8192 wavelengths:
 - 214 nm to 1773 nm
 - 1934 nm to 2044 nm
 - 2259 nm to 2386 nm
- Nadir, Limb, sub-solar, solar occultation and lunar occultation views
- Many in-flight calibration and monitoring modes
- Data provided by ESA

Summary

- SCIAMACHY
 - High (0.25nm) resolution lunar spectrum
 - Precise (<0.5%) lunar spectrum
 - Many (~1100) lunar measurements
 - Different geometries
 - New improved calibration (mirror model)
- Good agreement ROLO/GIRO (<2%)
 - Lunar phase angle dependence (GIRO?)
- Potentials for GIRO update
 - Phase angle dependence
 - Extension to shorter wavelength
 - GIRO polarisation?

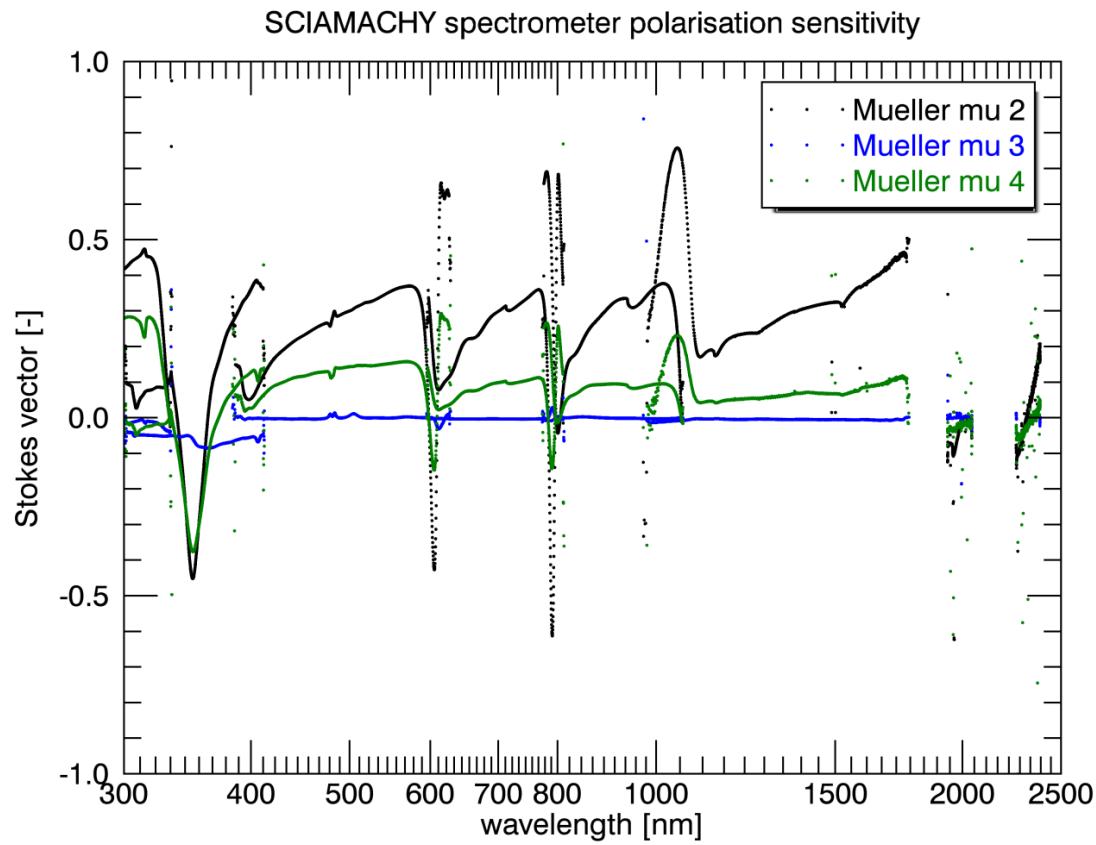

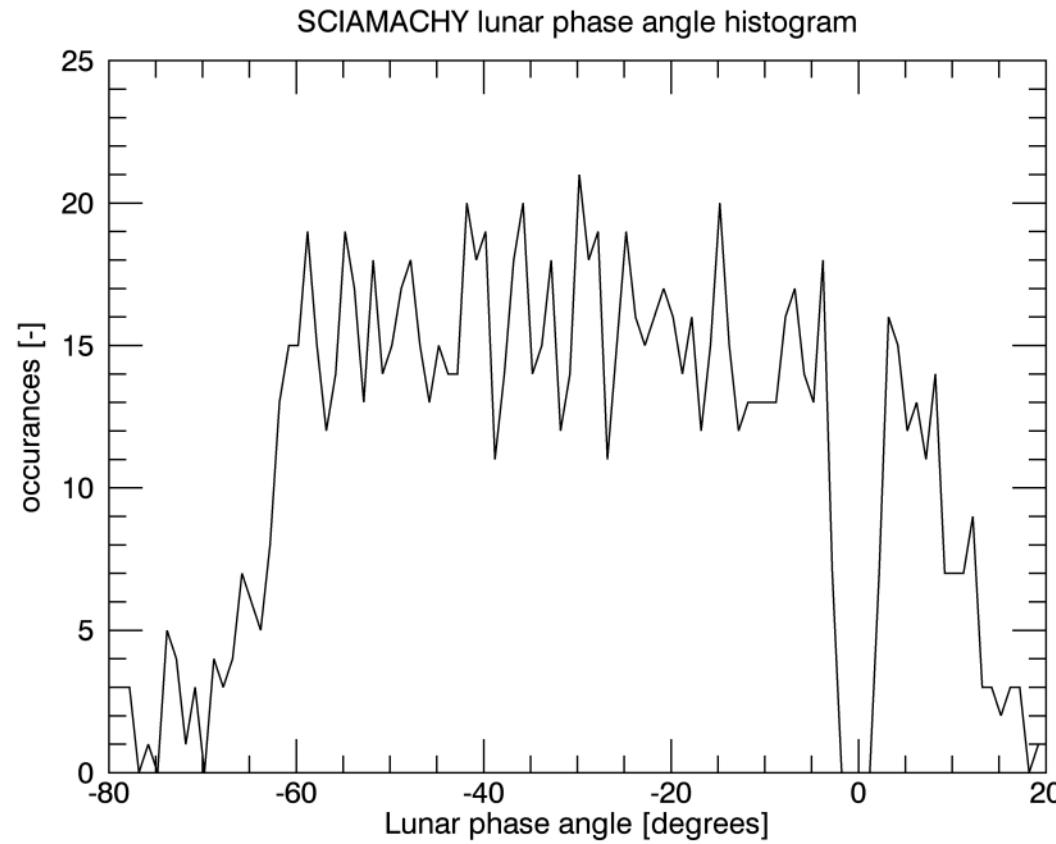

Thank you
