LABORATÓRIO DE ANÁLISE E PROCESSAMENTO DE IMAGENS DE SATÉLITES

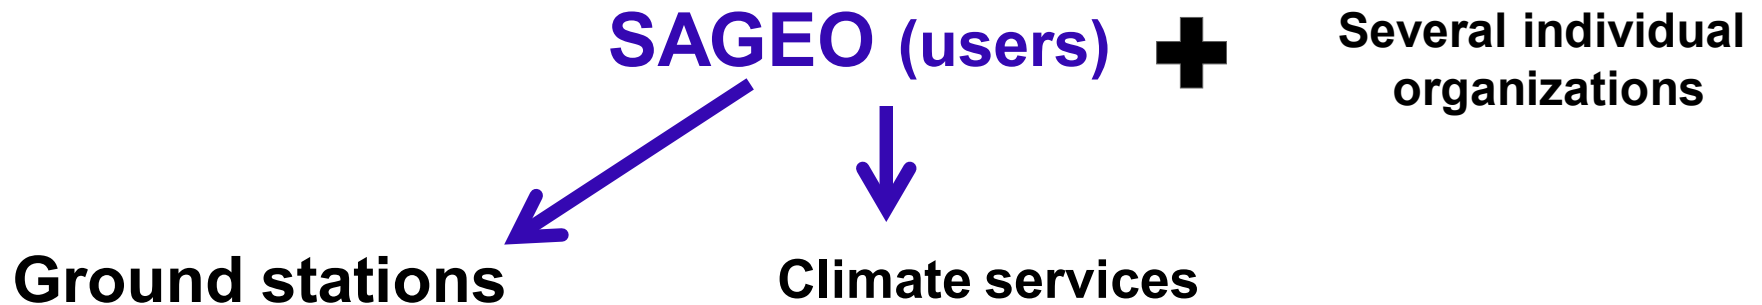

Successes and lessons from the use of European satellites in Brazil

Humberto A. Barbosa

OUTLINE:

- Introduction of LAPIS
- SAGEO (users)
- LAPIS EUMETCast station
- Examples & LAPIS cases
- Outcome from SAGEO

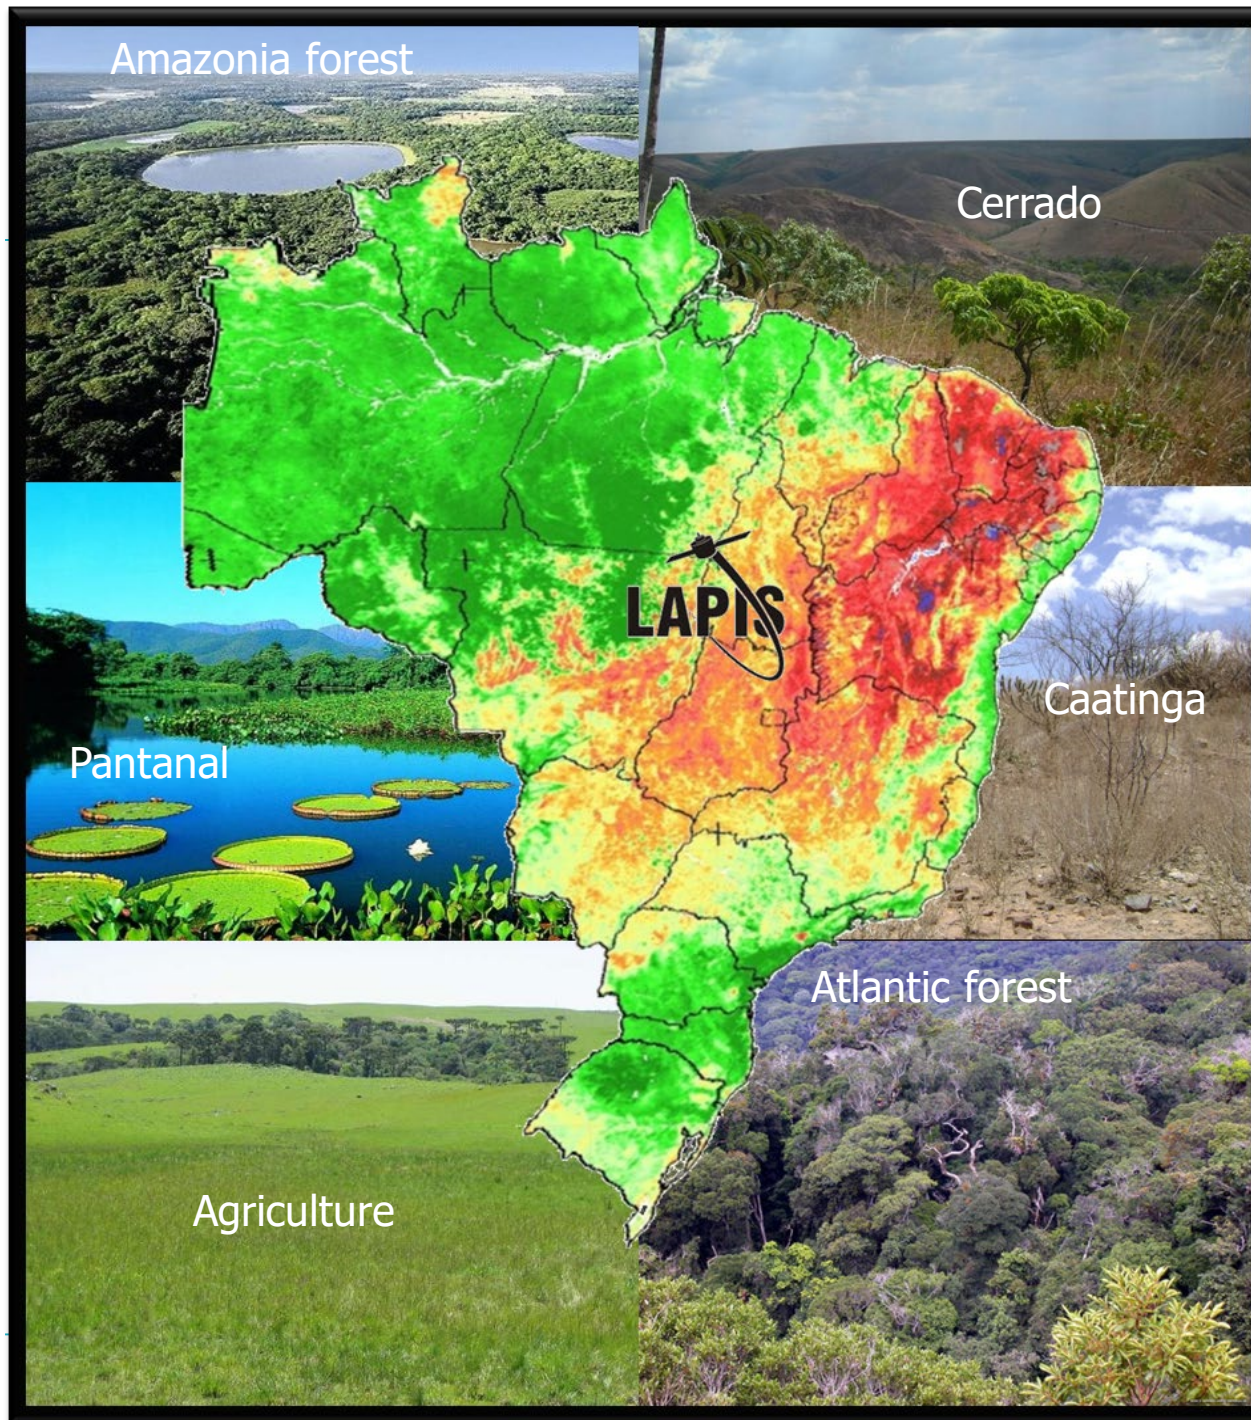

LAPIS coordination group in Brazil (called SAGEO, **South American**
Group of EUMETCast Users)

- Develop trainings and tutorials on **how to use the data and products** on the system and on what software packages work with the data and products.
- Develop a chat or blog or other (www.lapismet.com.br) to serve as a support system covering product usage, software questions, or other related issues.
- Make recommendations to the Eumetsat on possible new data or products and removal of unused data or products from the system.

MOTIVATION:

**Climate Services
for Drought in
Brazil**

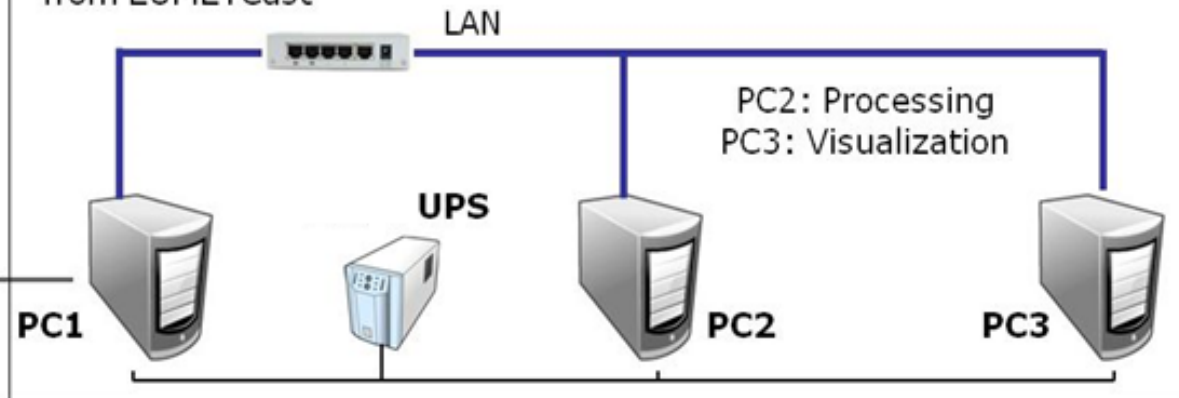

Station for EO data exploitation

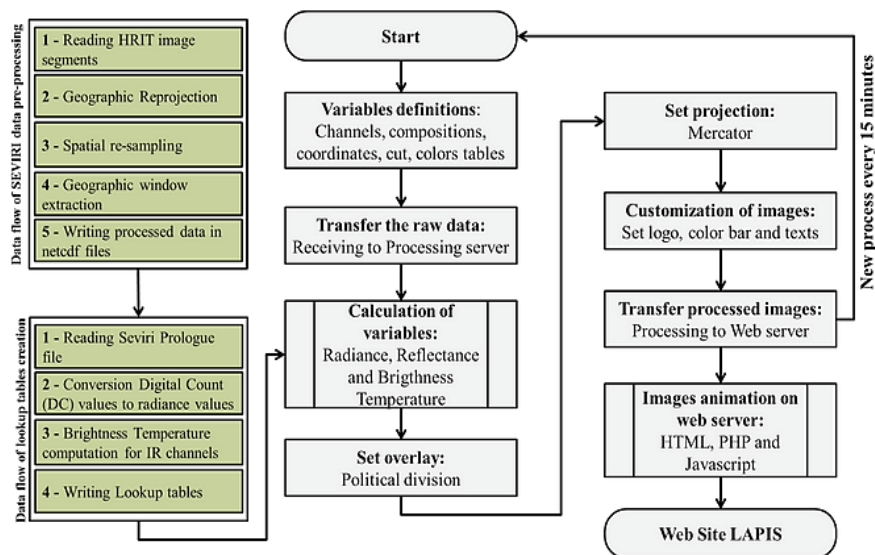

PC1:Receive data
from EUMETCast

Reception

Pre-processing

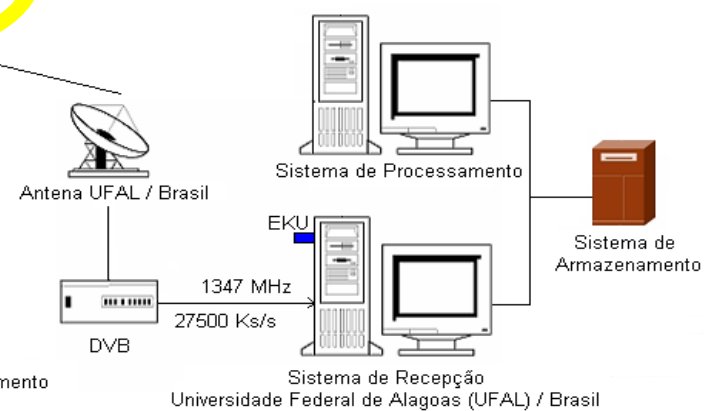

Analysis

► **Main goal of the EumetCast station is to ensure operational services**

Receive, processing and visualization data from EumetCast station

EUMETCast Lapis

EO datasets for LAPIS

Low Resolution Products:

- Copernicus/GIO and PROBA-V (in continuity with VGT: no SPOT-V anymore)
- Other platforms for fire monitoring and oceanographic applications.
- Precipitation
- Geostationary Products (MSG/LandSAF)

Medium Resolution Products

- Sentinel series

LAPIS station key principles

Open System: based on Open Source technologies (Ubuntu, GDAL, Mapserver/OpenLayers, postGresQL, **python**, php) and open to Users contributions (needs specifications and developments).

Co-operative tools: can be used as pre-processing tools for feeding downstream applications (e.g. ILWIS, MSGToolBox, MCIDAS-V)

Flexible in the Installation/Re-Installation:

Installation on a generic PC (Ubuntu OS or Windows)

Installation and activation of all components on a single computer.

Lighter Historical Datasets to facilitate re-install

Users in Brazil:

- ▶ **Research and Academia**
- ▶ **National Meteorological and Hydrological Services and other operational agencies**

Access to data:

- ▶ **Internet**
- ▶ **DVB-S / S2 (e.g. EUMETCast América (off), EUMETCast África (on))**

Software:

- ▶ **Low cost**
-

SAGEO grup

LABORATÓRIO DE ANÁLISE E PROCESSAMENTO DE IMAGENS DE SATÉLITES

- 2 EUMETCast stations
- 2 Brazilian States

2007

- +50 EUMETCast stations
- 20 Brazilian States

2017

Conceptual Models - the online collection Conceptual Models for Southern Hemisphere is a joint project between four southern hemispheric Centres of Excellence: Argentina, Australia, Brazil and South Africa. The project is co-funded by **WMO** and **EUMETSAT**. The purpose of the project is to improve warnings and awareness of weather risks through the use of conceptual models.

Conceptual Models - the online collection

Conceptual Models for Southern Hemisphere is a joint project between four southern hemispheric Centres of Excellence: Argentina, Australia, Brazil and South Africa. The project is co-funded by WMO and EUMETSAT.

The purpose of the project is to improve warnings and awareness of weather risks through the use of conceptual models.

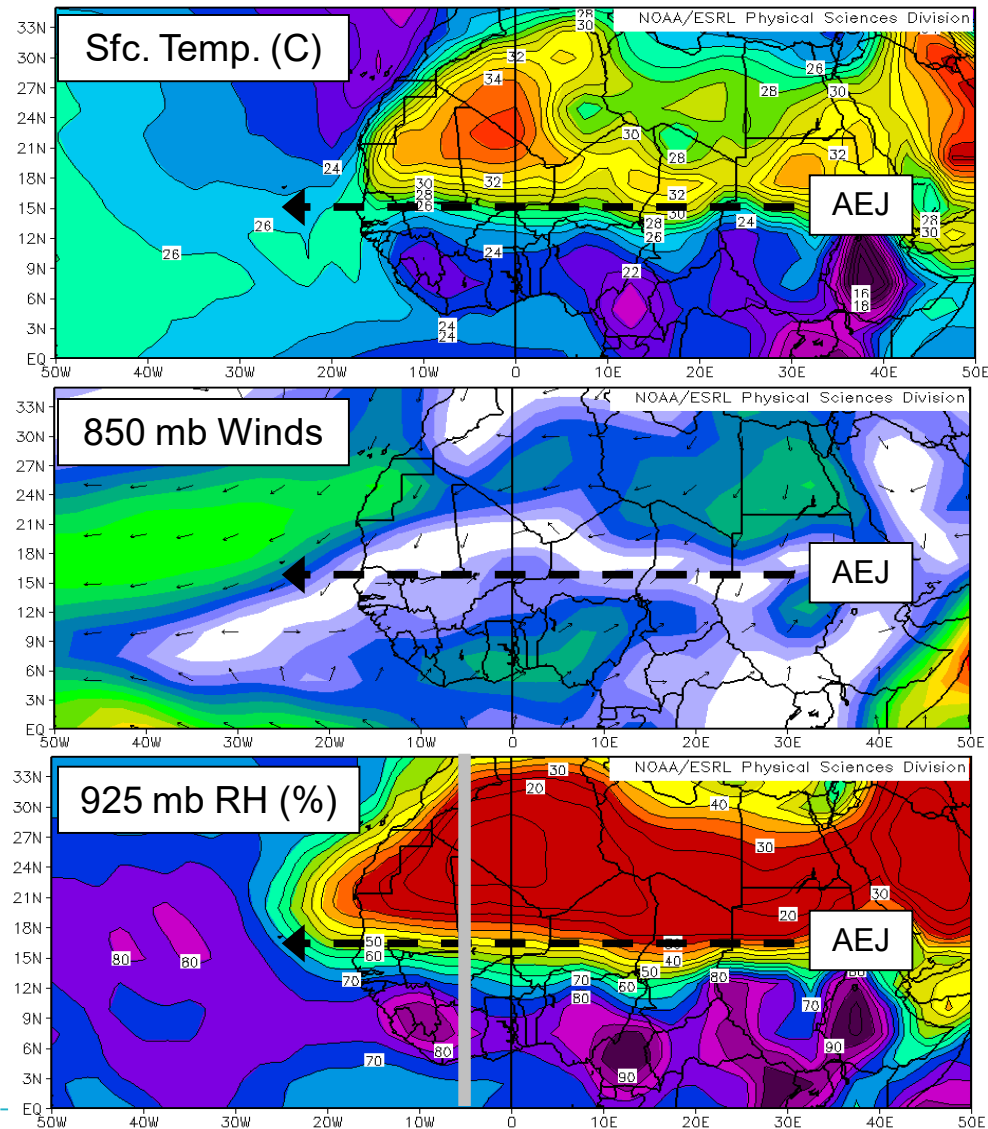

African Easterly Jet (AEJ)

Origin: Develop over sub-Saharan Africa from instabilities along the African Easterly Jet

Basics:

- Wavelengths of ~3000 km
- Move westward at 6-8 m/s
- 60-80 easterly waves cross the Atlantic each year between June and October
- 7-9 develop into tropical cyclones

BACIA DO SÃO FRANCISCO

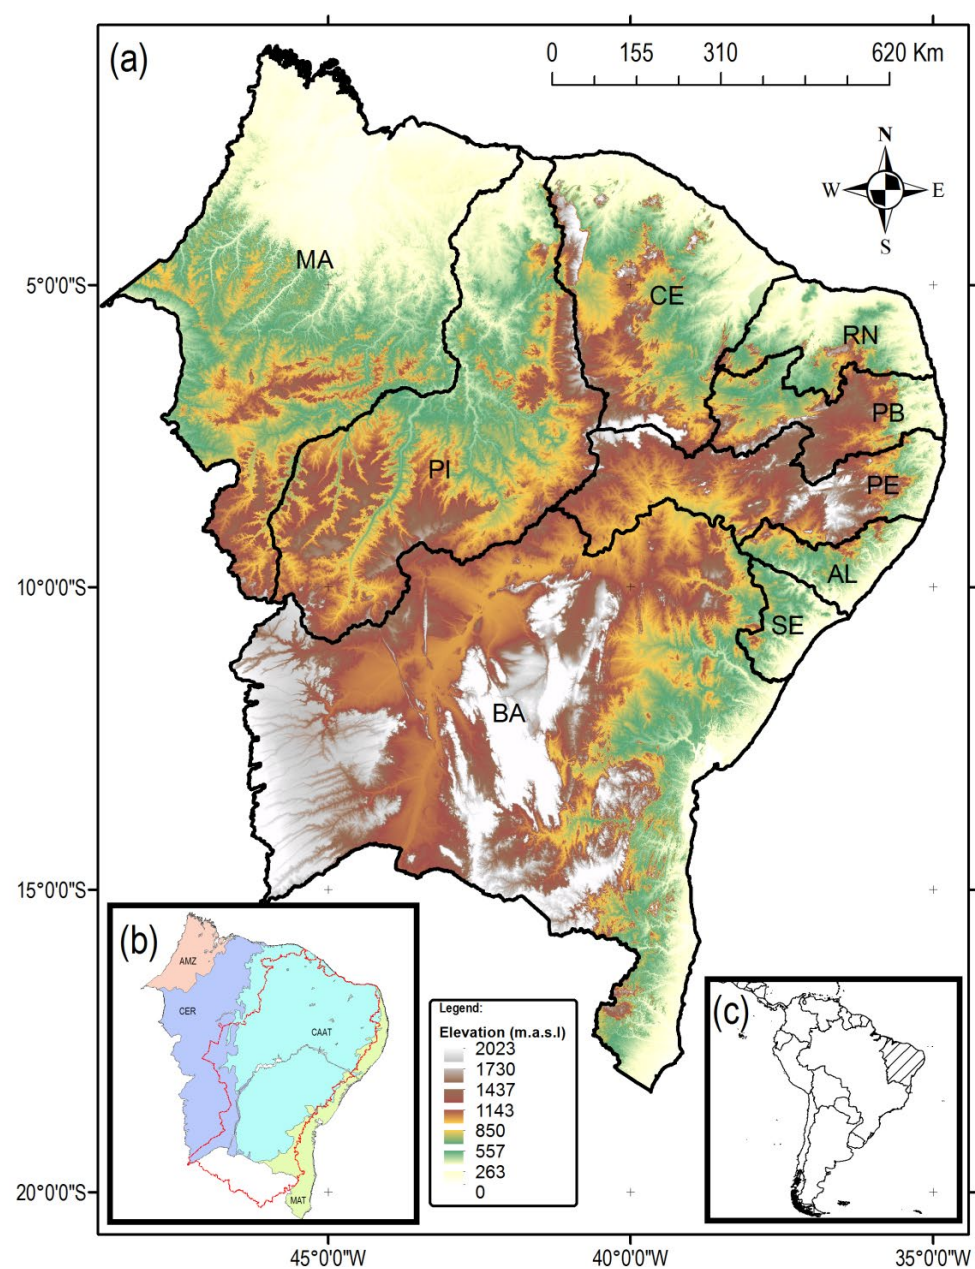

SUB-BACIA DO SÃO FRANCISCO

RECORTE DA SUB-BACIA DO SÃO FRANCISCO

- **Area:** $\sim 1,542,000 \text{ km}^2$ ($\sim 19\%$ of Brazil).
- **Population:** ~ 53 million (~ 34 people km^{-2})
- **Annual mean precipitation:** 250-2000 mm
- **Motivation:** Microwave-based satellite rainfall products offer an opportunity to assess rainfall-related events in Northeast Brazil (NEB), where rain-gauge stations are sparse.
- **Aim:** intercomparison of rainfall estimates from the SM2RAIN-CCI product against *in situ* rainfall observations under different bioclimatic conditions at the NEB.

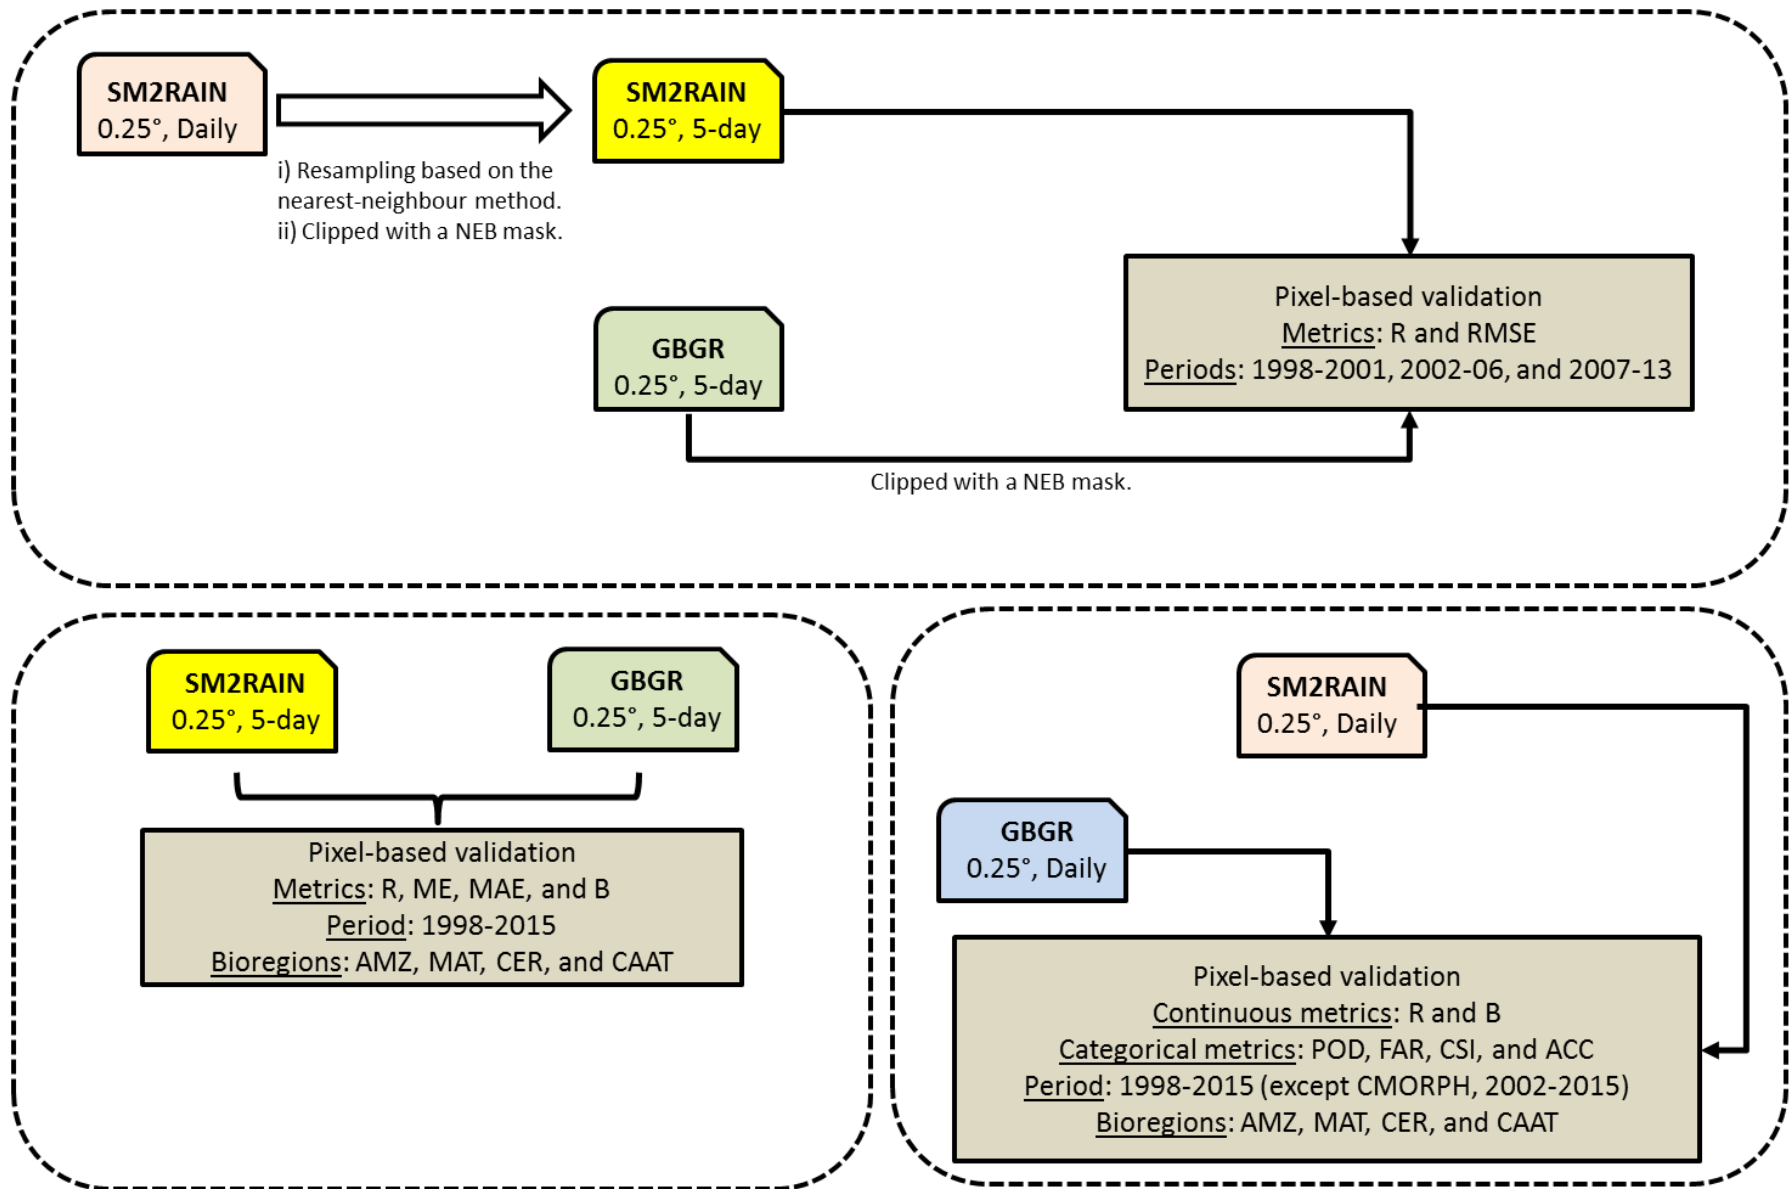

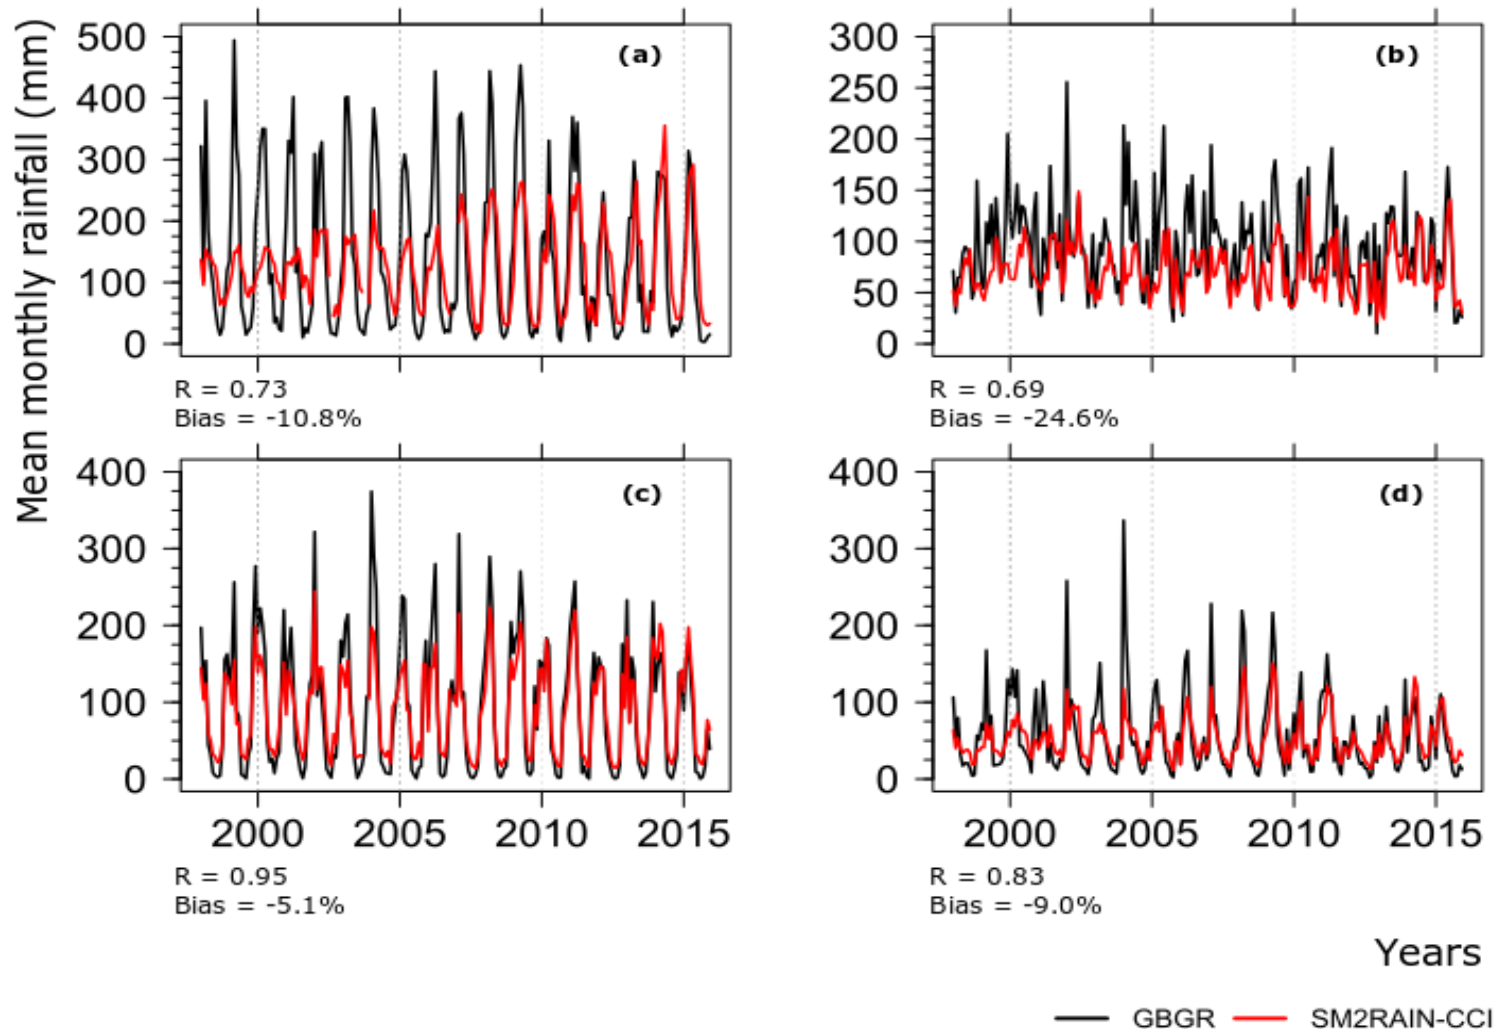

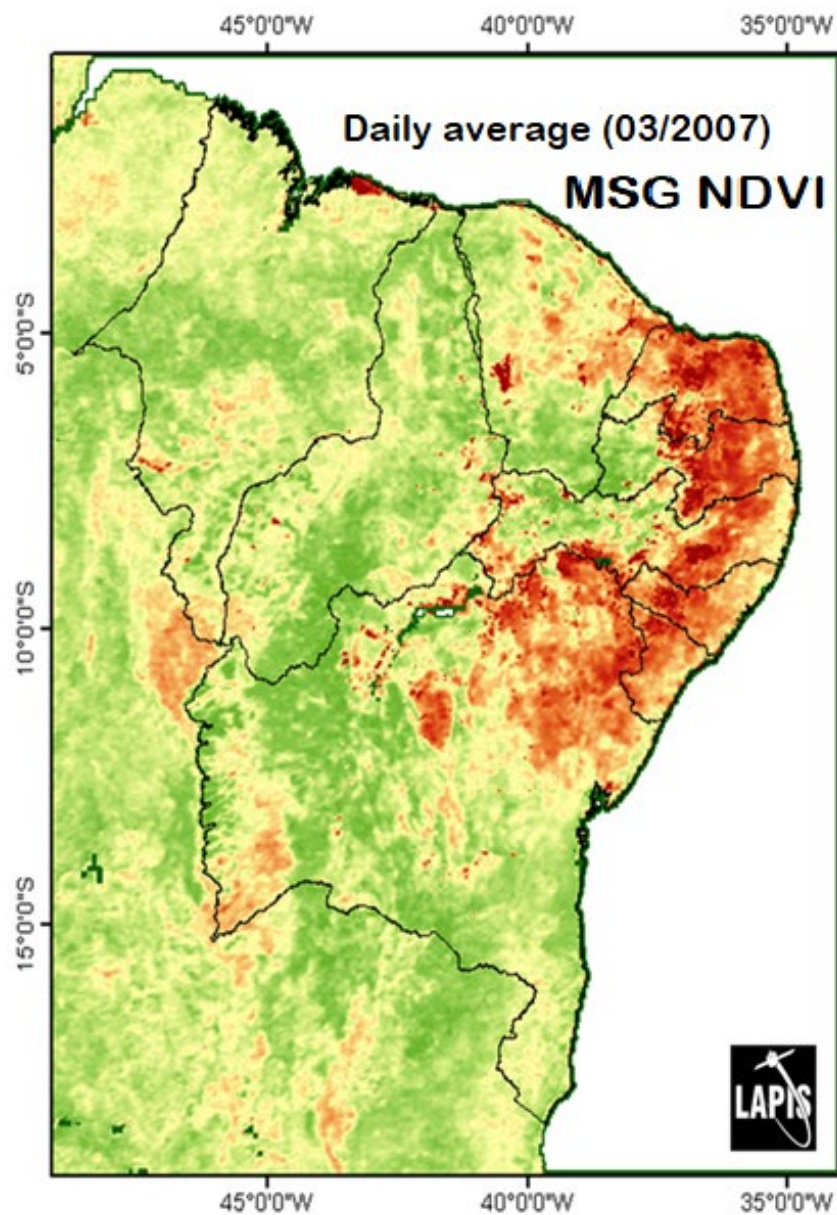

Fig. - Flowchart of the summarized research design and method.

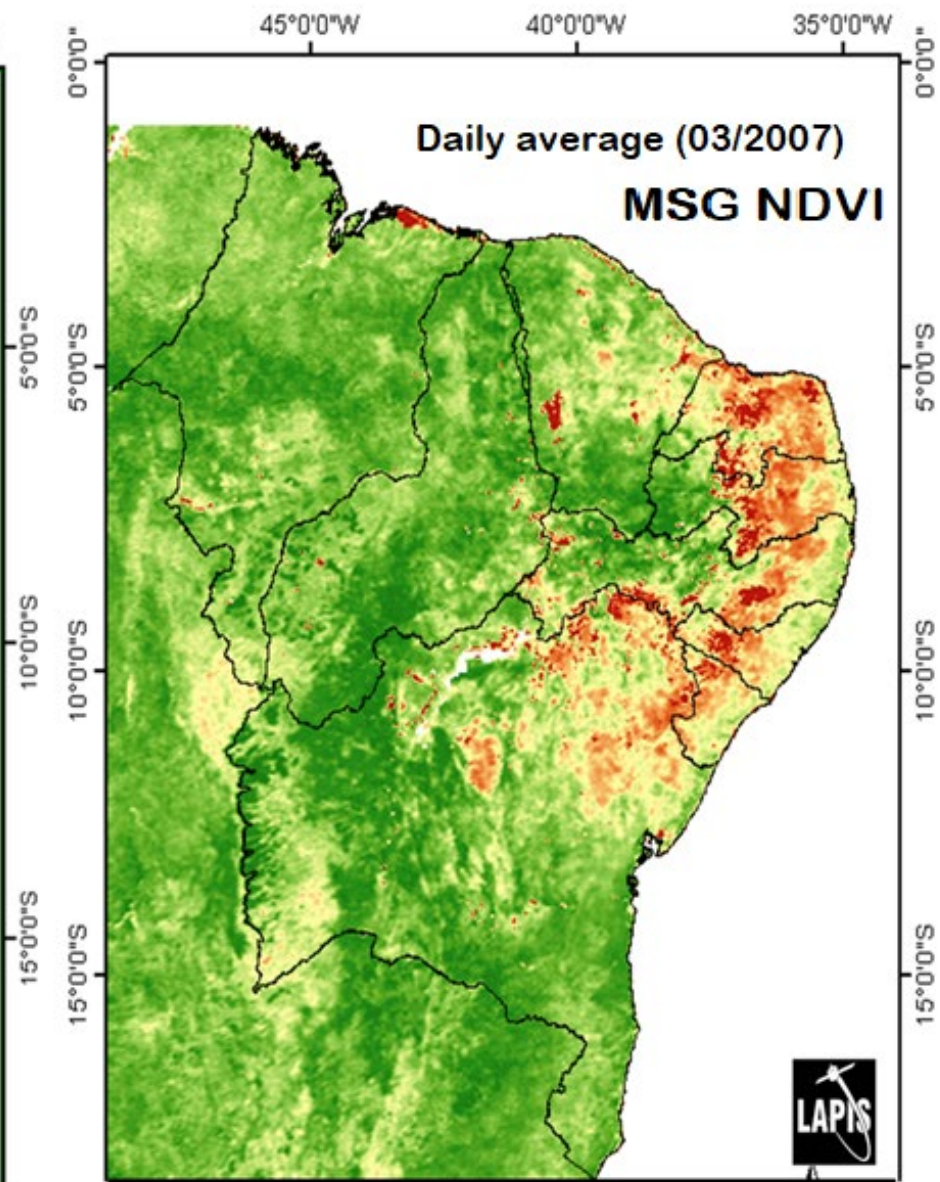

Fig. - Mean monthly rainfall derived from the GBGR data (black line) and the 5-day SM2RAIN-CCI dataset (red line) over the biomes: (a) AMZ; (b) MAT; (c) CER; and (d) CAAT during the period 1998-2015.

Building capacity and EUMETCast Workshops

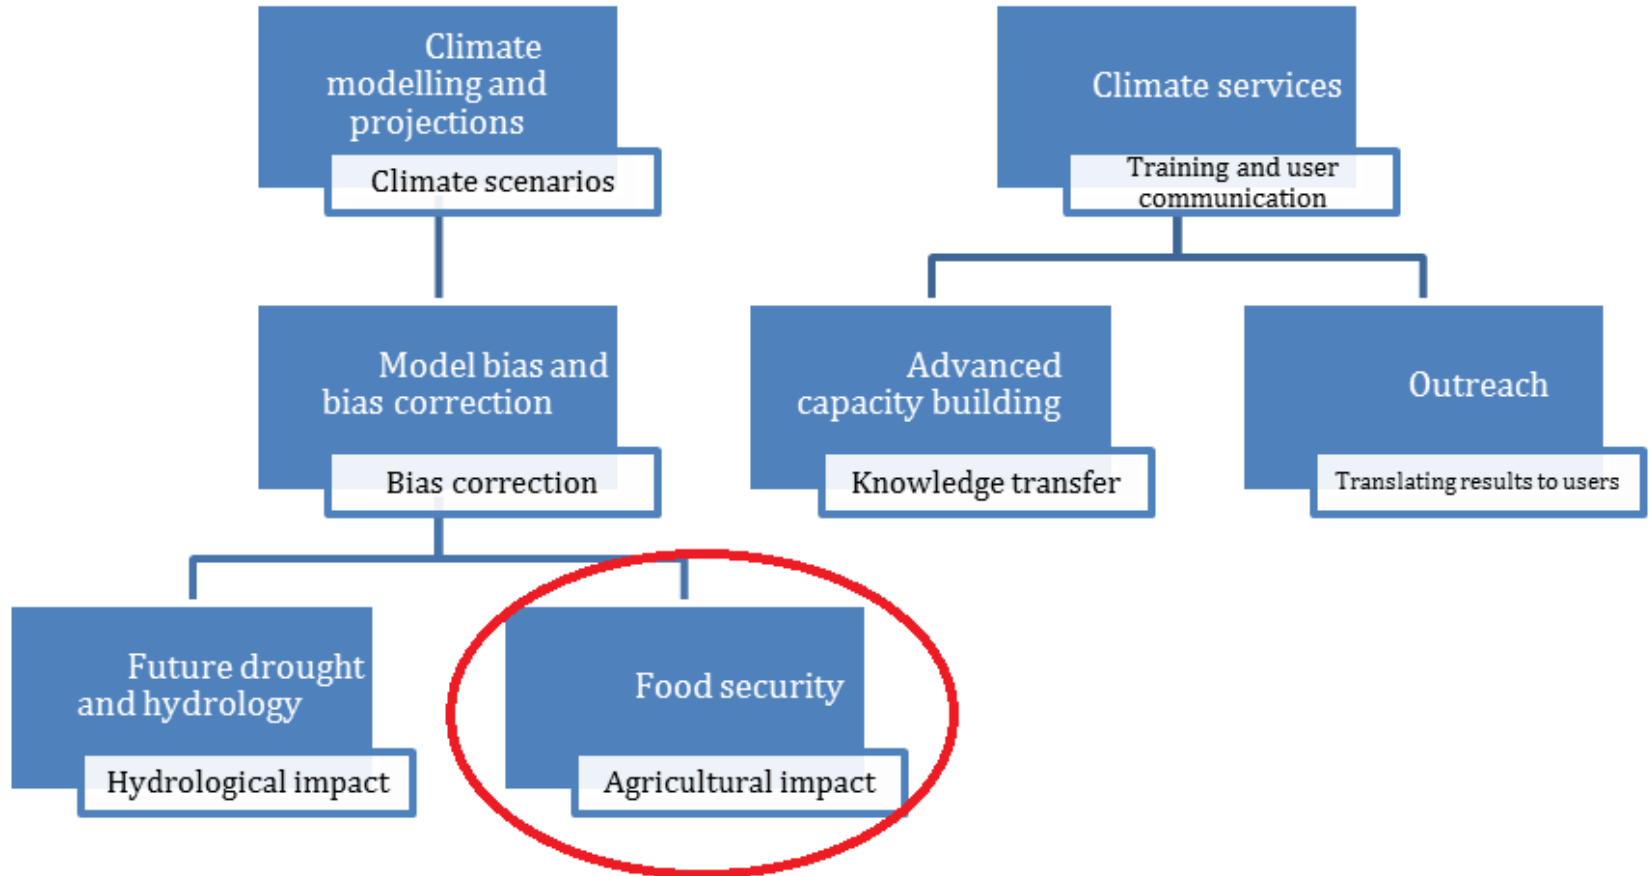

Outcome from SAGEO:

Points:

1. How to ensure effective dialogue of SAGEO with satellite operators (EUMETSAT and NOAA) at technical level?
2. How to ensure continued support to the SAGEO?

Identify thematic priority: Disaster risk reduction, particularly for: Data exchange, associated with early warnings. Topics related to Climate as well as emergencies and disasters (risk reduction, as well as response)

How vulnerable is LAC to future climate extremes?

Thanks!
