1 INTRODUCTION

1.1 Purpose and scope

This report compiles Monthly statistics from the routine monitoring of the IASI L2 temperature and humidity [RD 1] products with *in situ* sonde measurements.

The IASI L2 products come from the operational ground segment GS1. The reference measurements are retrieved from the NOAA Integrated Global Radiosonde Archive (IGRA) [RD 3]. The collocation and statistics are computed with the MONALiSA monitoring facility [RD 4].

This document is intended for internal monitoring purposes, to characterise and detect possible changes or trends in performances. It is also a public report to Users interested in IASI L2 temperature and humidity products uncertainties. In this respect, it is important to note that differences with sondes also include uncertainties of the sonde measurements themselves as well as collocation uncertainties. These come from the representativeness of a point measurements (sonde) *vs* the 12-40 km footprint of IASI and from the spatial and temporal lags between sonde and satellite acquisitions.

1.2 Collocation criteria and data selection

All IASI pixel within 3 h and 50 km from the sonde sites are collocated to the radiosonde measurement and stored in a match-up database.

The statistics are then computed globally and for Europe separately with clear-sky pixel (FLG_CLDNES = 1 or 2 [RD 2]) successfully processed with the statistical (in blue) and optimal estimation (in red) retrieval methods. The quality control on the IASI L2 products retains profiles with quality indicators (uncertainty estimates) better than 1.5 K for tropospheric temperature and 3.5 K in dew point for tropospheric humidity. This selection usually represent more than 95% of the pixel flagged free of clouds (20% of the overall measurements).

2 GLOBAL MONTHLY STATISTICS IN CLEAR-SKY PIXEL

2.1 Matchups

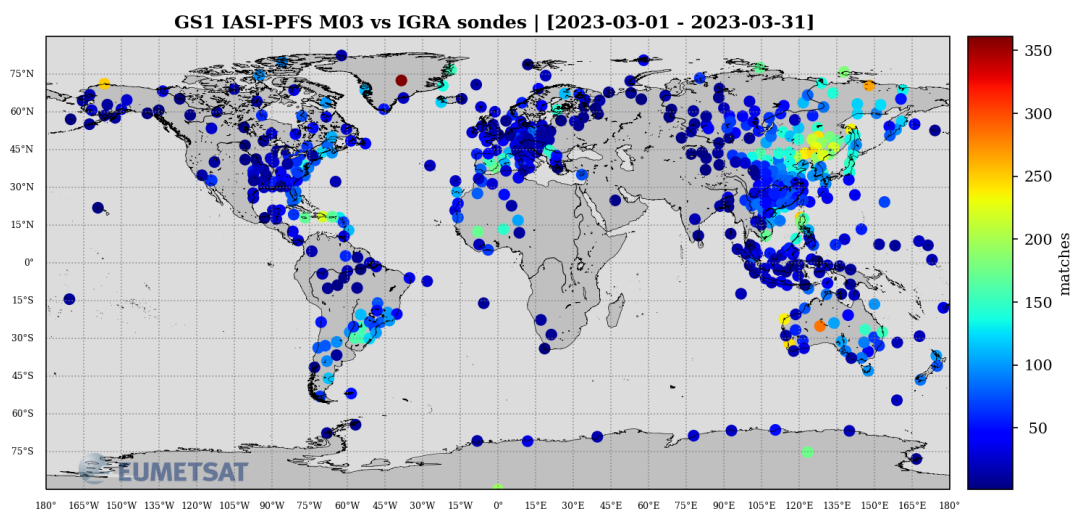

Figure 2.1: Number of match-ups per station with M03 IASI L2 from GS1 for 01-31/03/2023

2.2 Vertical profile statistics

2.2.1 Temperature

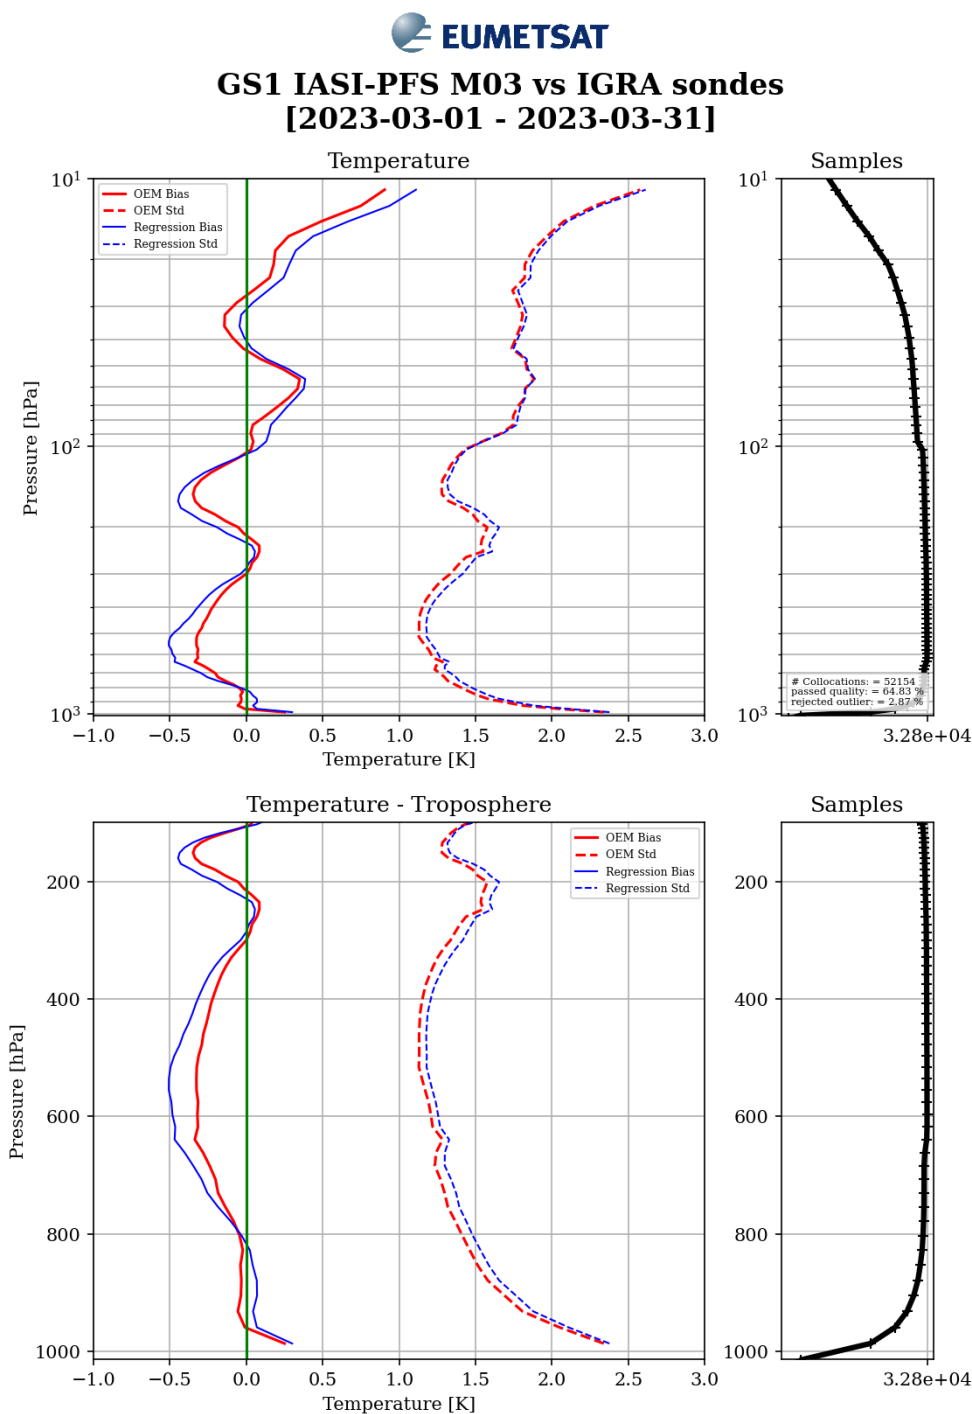

Figure 2.2: IASI vs sonde mean (solid line) difference and standard deviation (dash line) in temperature with the statistical (blue) and optimal estimation (red) retrieval methods (top: pressure log scale, bottom: linear scale). Global statistics with M03 IASI L2 from GS1 for 01-31/03/2023

2.2.2 Specific Humidity

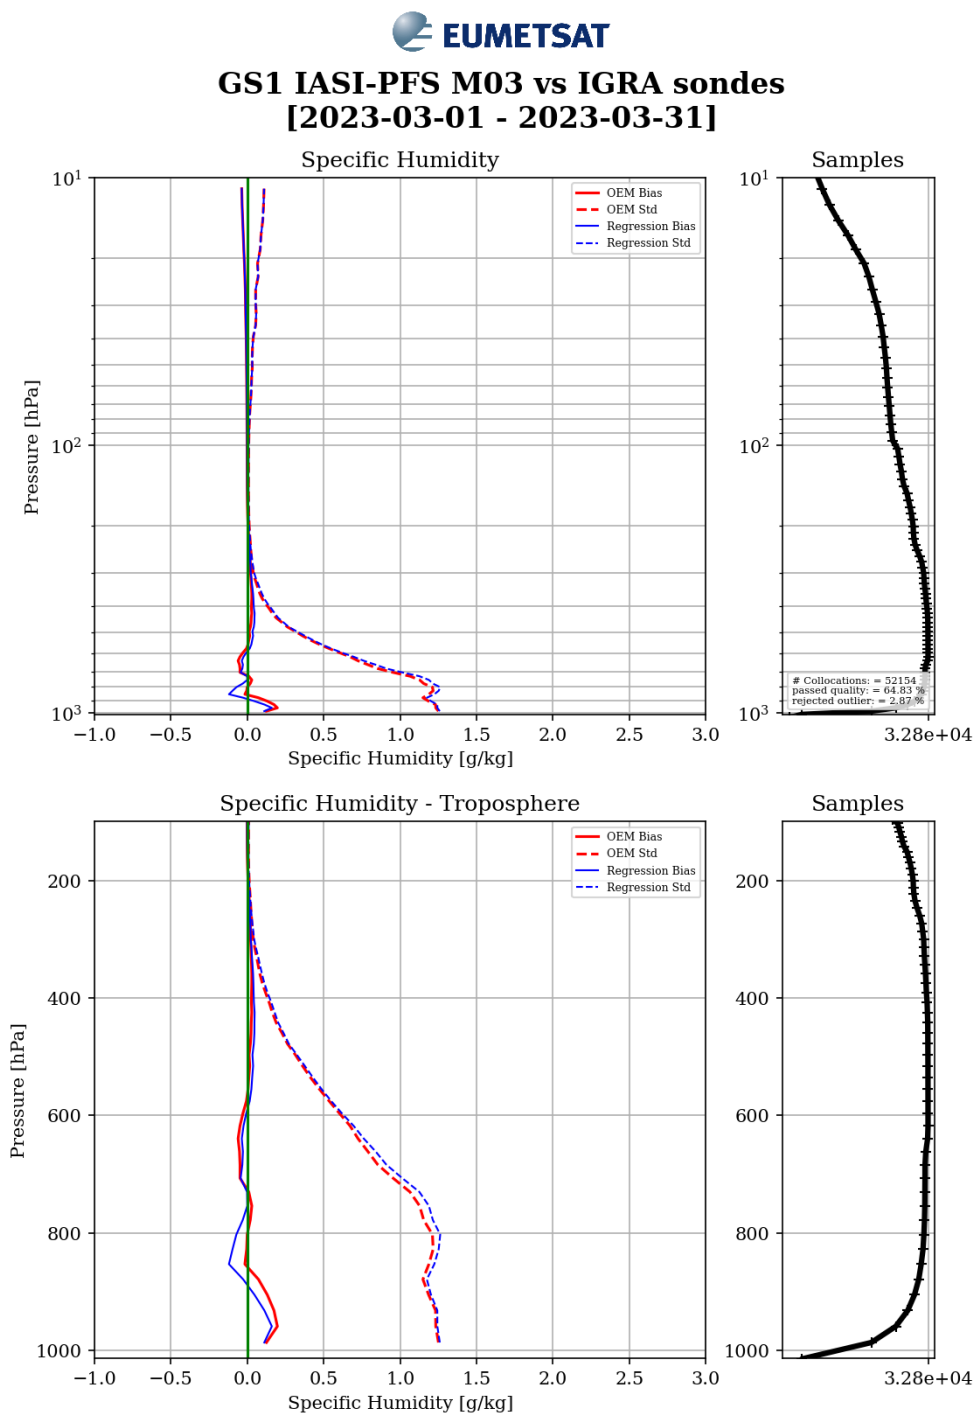

Figure 2.3: IASI vs sonde mean (solid line) difference and standard deviation (dash line) in specific humidity with the statistical (blue) and optimal estimation (red) retrieval methods (top: pressure log scale, bottom: linear scale). Global statistics with M03 IASI L2 from GS1 for for 01-31/03/2023

2.2.3 Relative Humidity

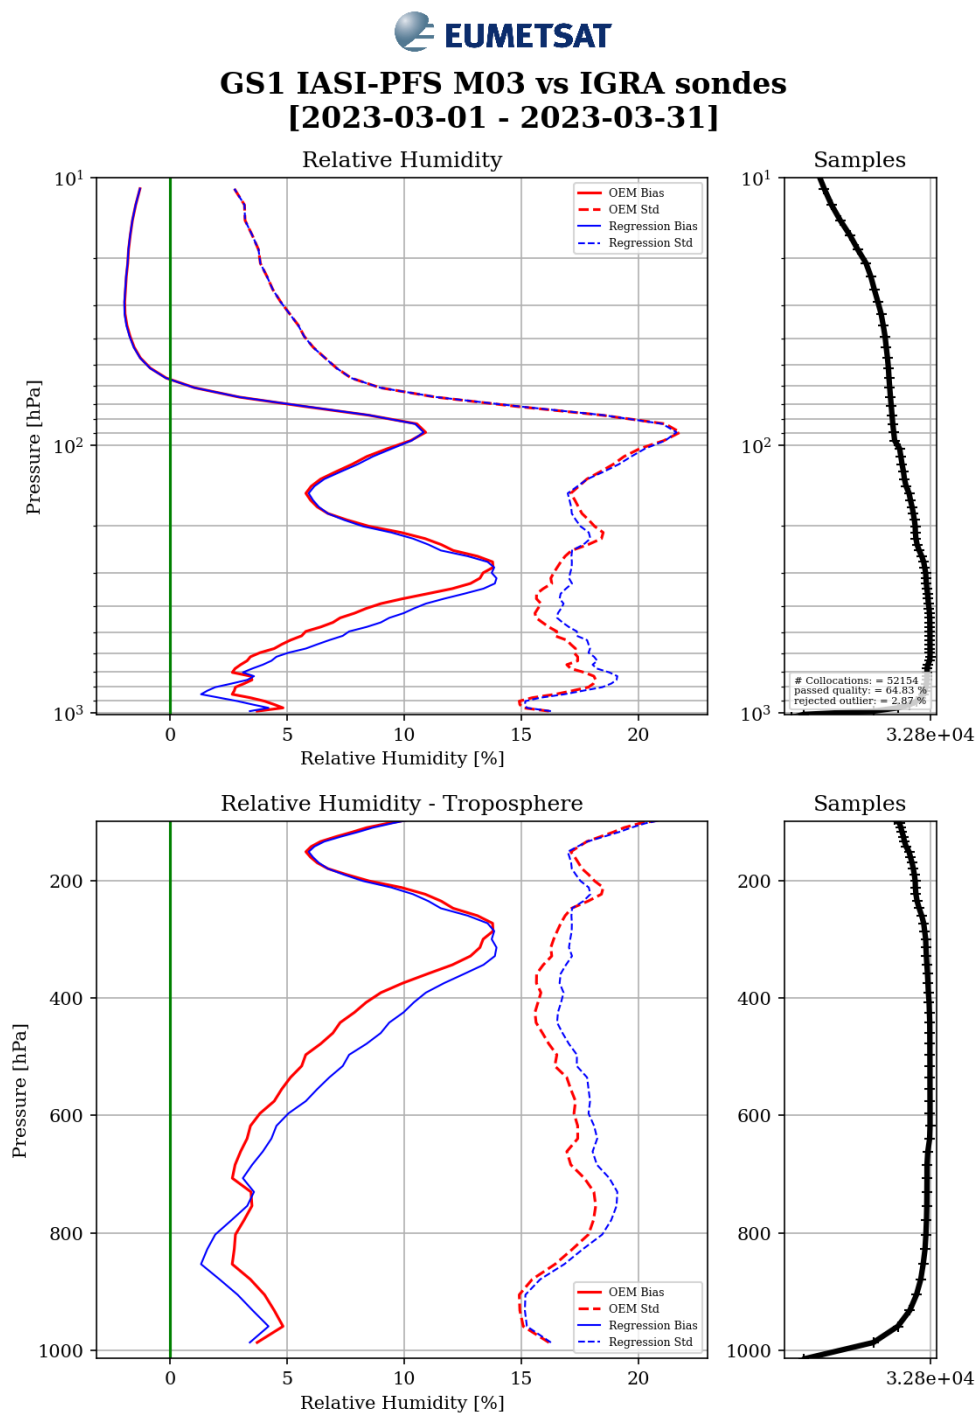

Figure 2.4: IASI vs sonde mean (solid line) difference and standard deviation (dash line) in relative humidity with the statistical (blue) and optimal estimation (red) retrieval methods (top: pressure log scale, bottom: linear scale). Global statistics with M03 IASI L2 from GS1 for 01-31/03/2023

2.3 Quality Indicator profile statistics

2.3.1 Temperature

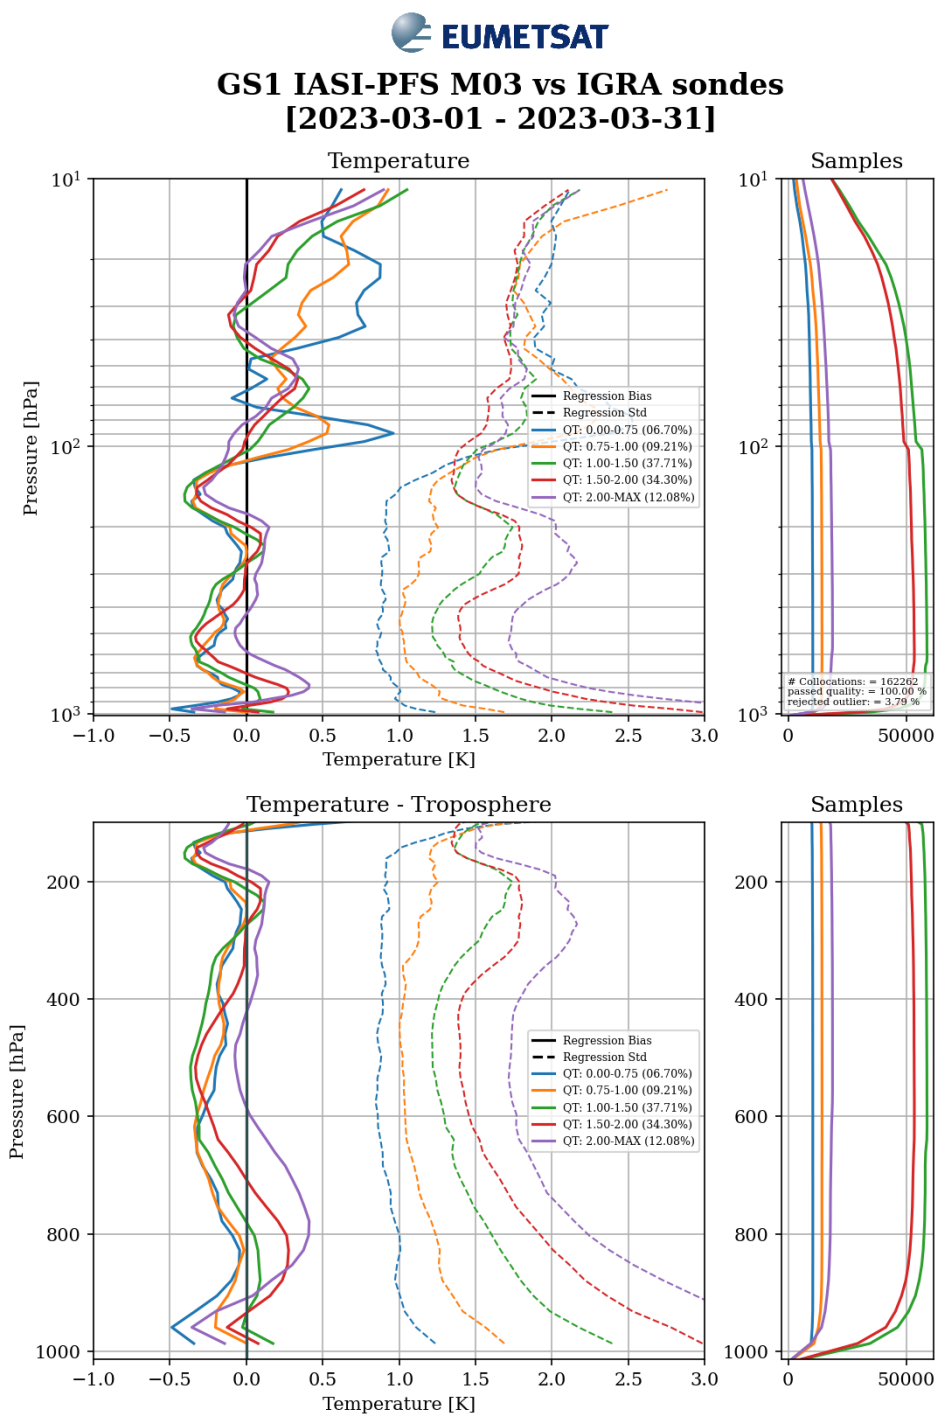

Figure 2.5: IASI vs sonde mean (solid line) difference and standard deviation (dash line) in temperature for different quality indicator ranges (top: pressure log scale, bottom: linear scale). Global statistics with M03 IASI L2 from GS1 for 01-31/03/2023

2.3.2 Specific Humidity

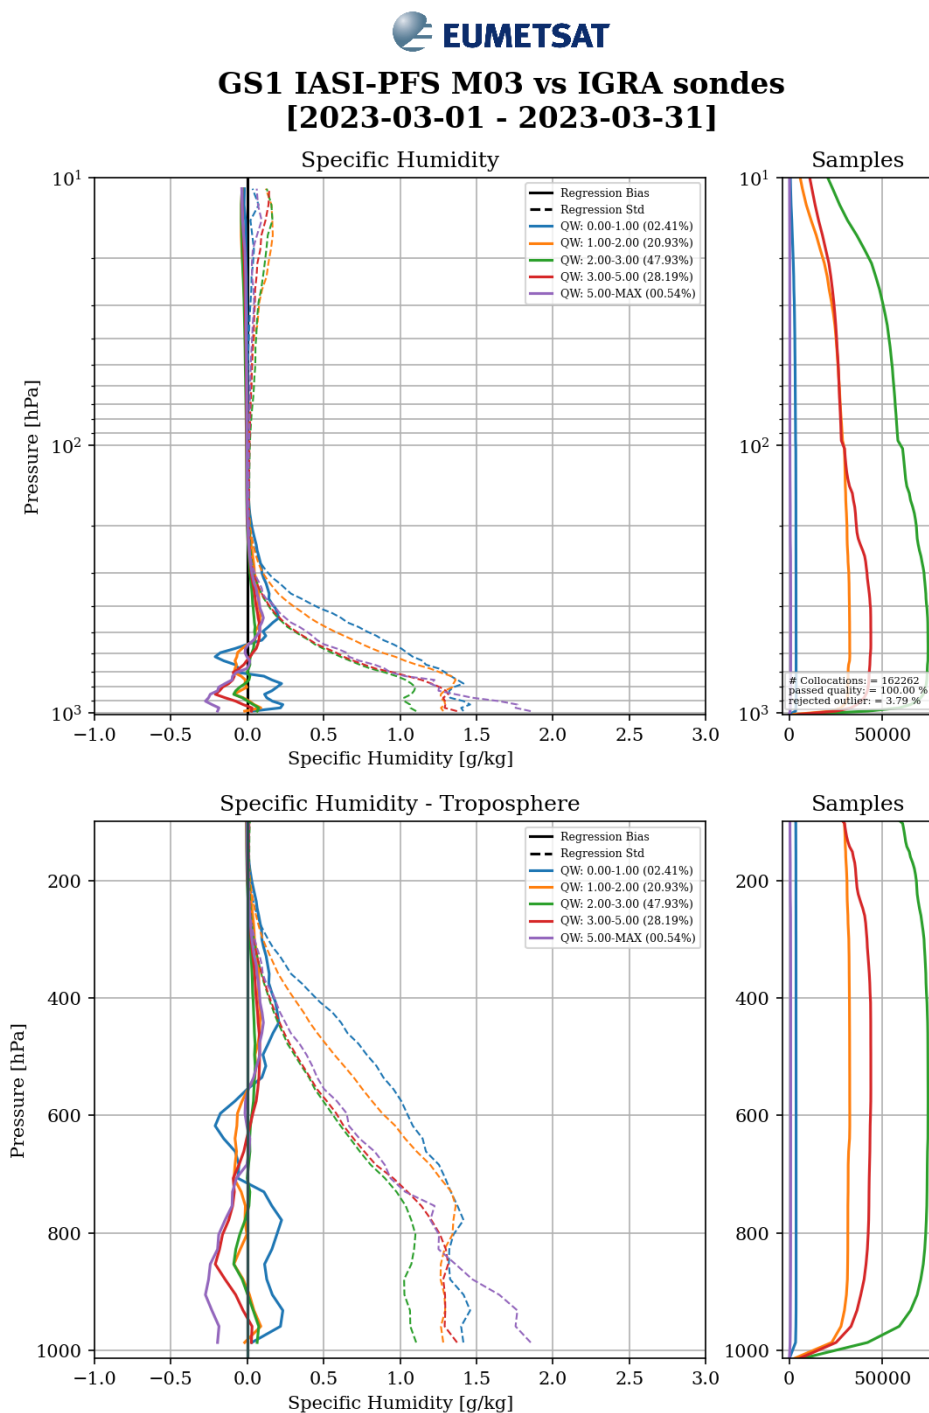

Figure 2.6: IASI vs sonde mean (solid line) difference and standard deviation (dash line) in specific humidity for different quality indicator ranges (top: pressure log scale, bottom: linear scale). Global statistics with M03 IASI L2 from GS1 for for 01-31/03/2023

2.3.3 Relative Humidity

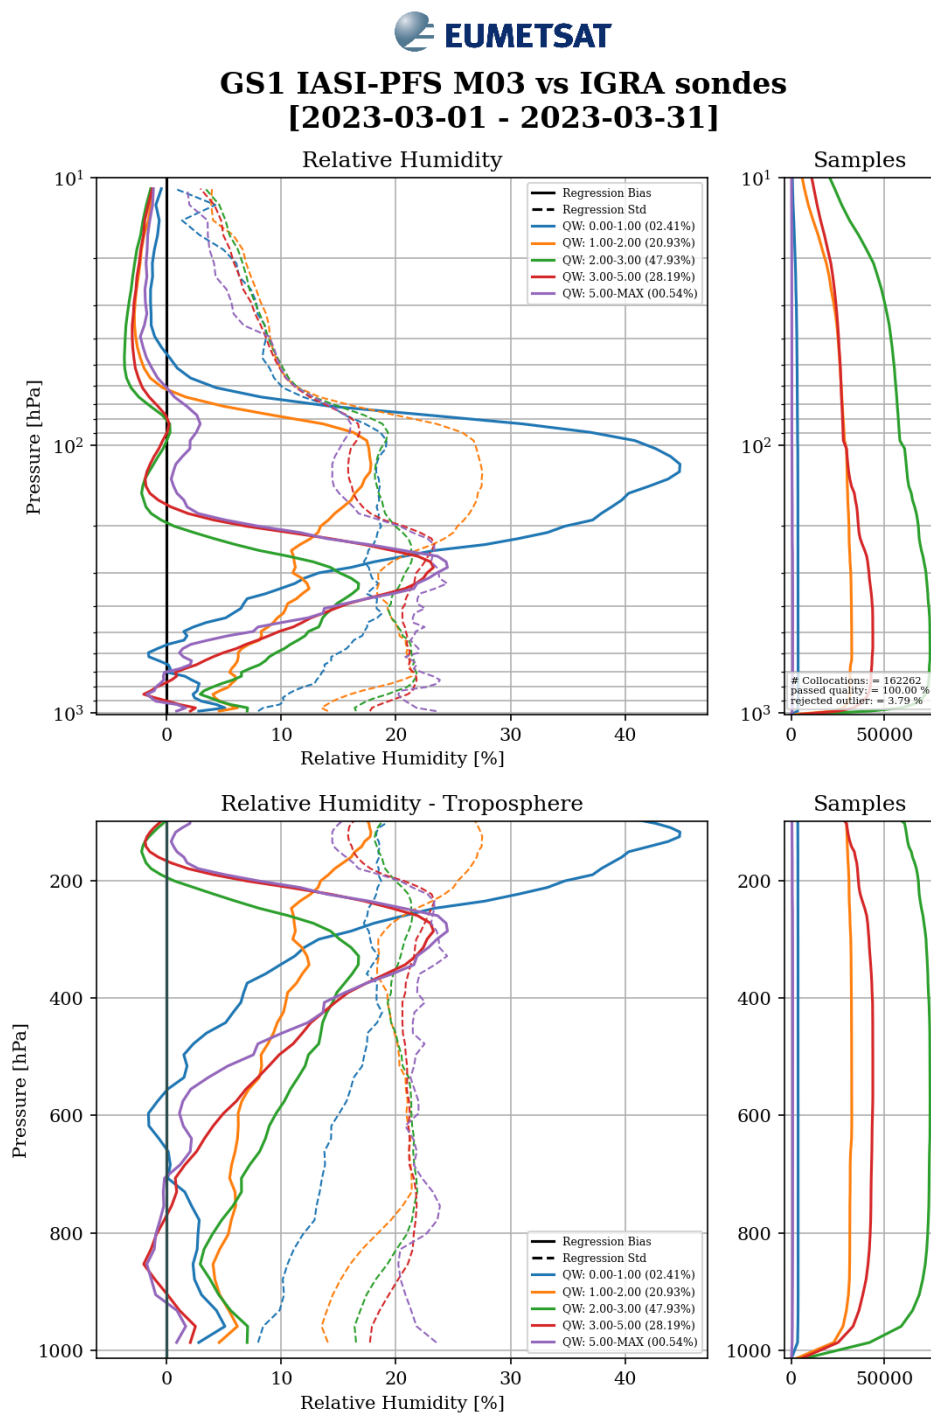

Figure 2.7: IASI vs sonde mean (solid line) difference and standard deviation (dash line) in relative humidity for different quality indicator ranges (top: pressure log scale, bottom: linear scale). Global statistics with M03 IASI L2 from GS1 for for 01-31/03/2023

2.4 Monthly time series

2.4.1 Temperature / Humidity

2.4.1.1 Level: 10 hPa

GS1 IASI-PFS M03 vs IGRA sondes [10.0 hPa]
[2023-03-01 - 2023-03-31]

Figure 2.8: Monthly time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 10 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 for 01-31/03/2023

2.4.1.2 Level: 100 hPa

GS1 IASI-PFS M03 vs IGRA sondes [100.0 hPa] [2023-03-01 - 2023-03-31]

Figure 2.9: Monthly time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 100 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 for 01-31/03/2023

2.4.1.3 Level: 200 hPa

GS1 IASI-PFS M03 vs IGRA sondes [200.0 hPa] [2023-03-01 - 2023-03-31]

Figure 2.10: Monthly time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 200 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 for 01-31/03/2023

2.4.1.4 Level: 300 hPa

GS1 IASI-PFS M03 vs IGRA sondes [300.0 hPa] [2023-03-01 - 2023-03-31]

Figure 2.11: Monthly time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 300 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 for 01-31/03/2023

2.4.1.5 Level: 500 hPa

GS1 IASI-PFS M03 vs IGRA sondes [500.0 hPa] [2023-03-01 - 2023-03-31]

Figure 2.12: Monthly time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 500 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 for 01-31/03/2023

2.4.1.6 Level: 600 hPa

GS1 IASI-PFS M03 vs IGRA sondes [600.0 hPa] [2023-03-01 - 2023-03-31]

Figure 2.13: Monthly time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 600 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 for 01-31/03/2023

2.4.1.7 Level: 800 hPa

GS1 IASI-PFS M03 vs IGRA sondes [800.0 hPa] [2023-03-01 - 2023-03-31]

Figure 2.14: Monthly time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 800 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 for 01-31/03/2023

2.4.1.8 Level: 1000 hPa

GS1 IASI-PFS M03 vs IGRA sondes [1000.0 hPa] [2023-03-01 - 2023-03-31]

Figure 2.15: Monthly time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 1000 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 for 01-31/03/2023

2.4.2 Precipitable Water

GS1 IASI-PFS M03 vs IGRA sondes Precipitable Water [2023-03-01 - 2023-03-31]

Figure 2.16: Monthly time series of Precipitable Water mean difference and standard deviation in absolute (top 2 panels) and relative Difference (middle 2 panels) between IASI L2 and IGRA. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 for 01-31/03/2023

2.5 Long-term time series

2.5.1 Temperature / Humidity

2.5.1.1 Level: 10 hPa

GS1 IASI-PFS M03 vs IGRA sondes [10.0 hPa]
[2018-12-12 - 2023-03-31]

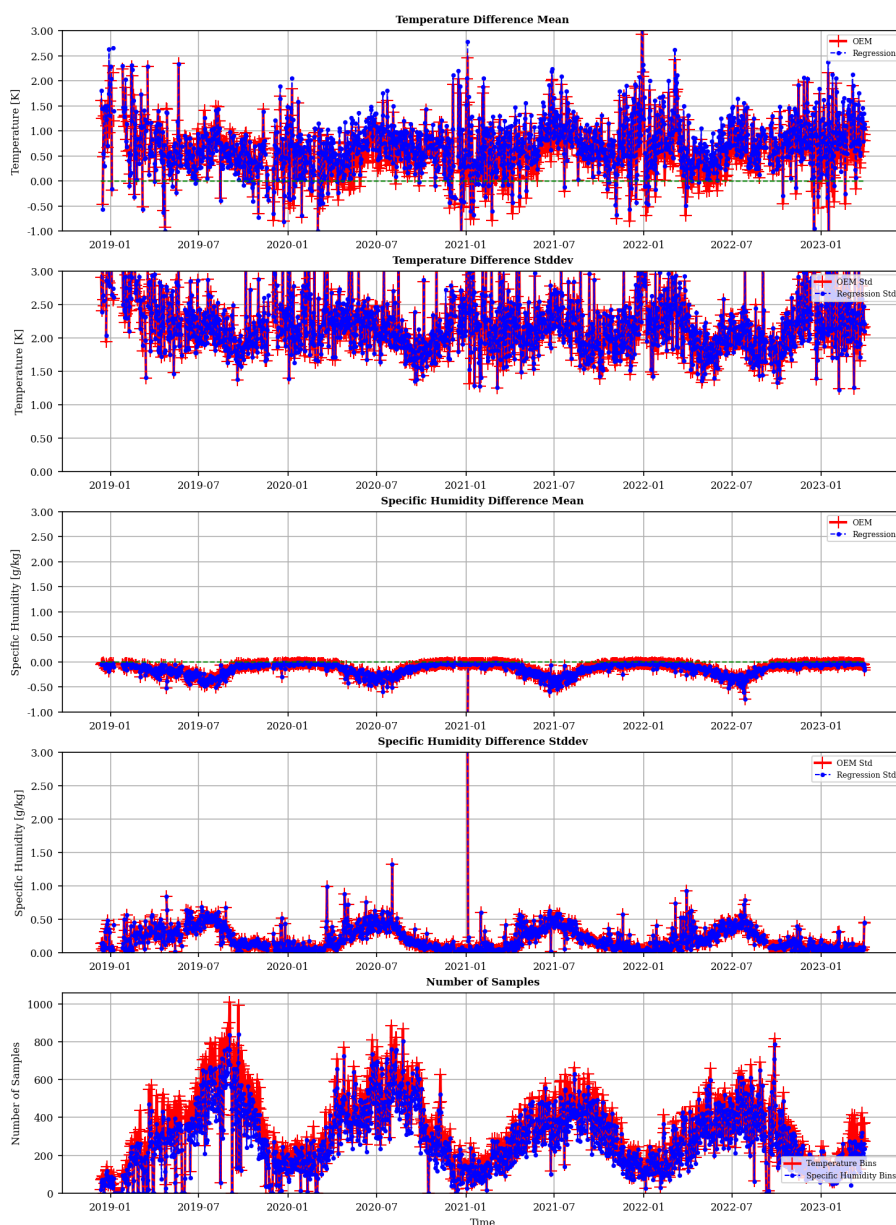

Figure 2.17: Long-term time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 10 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 updated on 31/03/2023

2.5.1.2 Level: 100 hPa

GS1 IASI-PFS M03 vs IGRA sondes [100.0 hPa]
[2018-12-12 - 2023-03-31]

Figure 2.18: Long-term time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 100 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 updated on 31/03/2023

2.5.1.3 Level: 200 hPa

GS1 IASI-PFS M03 vs IGRA sondes [200.0 hPa]
[2018-12-12 - 2023-03-31]

Figure 2.19: Long-term time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 200 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 updated on 31/03/2023

2.5.1.4 Level: 300 hPa

GS1 IASI-PFS M03 vs IGRA sondes [300.0 hPa] [2018-12-12 - 2023-03-31]

Figure 2.20: Long-term time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 300 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 updated on 31/03/2023

2.5.1.5 Level: 500 hPa

GS1 IASI-PFS M03 vs IGRA sondes [500.0 hPa] [2018-12-12 - 2023-03-31]

Figure 2.21: Long-term time series of mean difference and standard deviation in temperature (top 2 panels) and humidity (middle 2 panels) between IASI L2 and sondes at 500 hPa. The bottom panel shows the number of Monthly match-ups. Global statistics with M03 IASI L2 from GS1 updated on 31/03/2023

2.5.1.6 Level: 600 hPa

GS1 IASI-PFS M03 vs IGRA sondes [600.0 hPa] [2018-12-12 - 2023-03-31]
